ELSEVIER

Comput. Methods Appl. Mech. Engrg. 125 (1995) 357–360

Computer methods in applied mechanics and engineering

Subject index of Volume 125

Coupled problems

Numerical method for coupled fluid flow, heat transfer and stress analysis using unstructured moving meshes with cells of arbitrary topology, I. Demirdžić and S. Muzaferija 235–255

Dynamics

Chebyshev series solution to non-linear boundary value problems in rectangular domain, Y. Nath and S. Kumar 41– 52

Computational prediction and redesign for viscoelastically damped structures, X. Cao and H.-P. Mlejnek 1– 16

Computational procedures for topological shape design, M.S. Vimawala and G.M. Turkiyyah 257–285

Implicit time integration of a class of constrained hybrid formulations—Part I: Spectral stability theory, C. Farhat, L. Crivelli and M. Géradin 71–107

Elasticity

Hybrid analysis of Lamb wave reflection by a crack at the fixed edge of a composite plate, W.M. Karunasena, K.M. Liew and S. Kitipornchai 221–233

Electromagnetic fields

Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220

Electronics

Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220

Finite difference methods

A self-optimizing single-step algorithm for the numerical integration of parabolic equations, R. Ganesan and N.J. Salamon 109–121

Finite element and matrix methods

A formulation of the MITC4 shell element for finite strain elasto-plastic analysis, E.N. Dvorkin, D. Pantuso and E.A. Repetto 17– 40

A self-optimizing single-step algorithm for the numerical integration of parabolic equations, R. Ganesan and N.J. Salamon 109–121

A P^1–P^0 finite element method for a model of polymer crystallization, X. Jiang and R.H. Nochetto and C. Verdi 303–317

Computational prediction and redesign for viscoelastically damped structures, X. Cao and H.-P. Mlejnek 1– 16
Hybrid analysis of Lamb wave reflection by a crack at the fixed edge of a composite plate, W.M. Karunasena, K.M. Liew and S. Kitipornchai 221–233
Numerical analysis of a FEM for a transient viscoelastic flow, J. Baranger and S. Wardi 171–185
Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220

Fluid mechanics
Numerical analysis of a FEM for a transient viscoelastic flow, J. Baranger and S. Wardi 171–185
Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220

Fracture mechanics
Generalised hardening plasticity approximated via anisotropic elasticity: A neural network approach, P.S. Theocaris and P.D. Panagiotopoulos 123–139

Heat and diffusion
A self-optimizing single-step algorithm for the numerical integration of parabolic equations, R. Ganesan and N.J. Salamon 109–121
A P^1–P^0 finite element method for a model of polymer crystallization, X. Jiang and R.H. Nochetto and C. Verdi 303–317

Kinematics
Computerized determination of curvature relations and contact ellipse for conjugate surfaces, F.L. Litvin, N.X. Chen and J.-S. Chen 151–170
Element behaviour in post-critical plane frame analysis, C. Pacoste and A. Eriksson 319–343

Miscellaneous topics
Numerical method for coupled fluid flow, heat transfer and stress analysis using unstructured moving meshes with cells of arbitrary topology, I. Demirdžić and S. Muzaferija 235–255
The optimal packing of arbitrarily-shaped polygons using simulated annealing and polynomial-time cooling schedules, V.E. Theodoracatos and J.L. Grimsley 53– 70

Neural networks
Generalised hardening plasticity approximated via anisotropic elasticity: A neural network approach, P.S. Theocaris and P.D. Panagiotopoulos 123–139

Nonlinear mechanics
Chebyshev series solution to non-linear boundary value problems in rectangular domain, Y. Nath and S. Kumar 41– 52
Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220

Numerical solution procedures
A self-optimizing single-step algorithm for the numerical integration of parabolic equations, R. Ganesan and N.J. Salamon 109–121

Computational prediction and redesign for viscoelastically damped structures, X. Cao and H.-P. Mlejnek 1– 16
Computational procedures for topological shape design, M.S. Vimawala and G.M. Turkiyyah 257–285
Hybrid analysis of Lamb wave reflection by a crack at the fixed edge of a composite plate, W.M. Karunasena, K.M. Liew and S. Kitipornchai 221–233
Implicit time integration of a class of constrained hybrid formulations—Part I: Spectral stability theory, C. Farhat, L. Crivelli and M. Géradin 71–107
Numerical method for coupled fluid flow, heat transfer and stress analysis using unstructured moving meshes with cells of arbitrary topology, I. Demirdžić and S. Muzaferija 235–255
Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220
The optimal packing of arbitrarily-shaped polygons using simulated annealing and polynomial-time cooling schedules, V.E. Theodoracatos and J.L. Grimsley 53– 70

Optimization
Computational prediction and redesign for viscoelastically damped structures, X. Cao and H.-P. Mlejnek 1– 16

Optimization and design of structures
Computational procedures for topological shape design, M.S. Vimawala and G.M. Turkiyyah 257–285

Phase changes
A P^1–P^0 finite element method for a model of polymer crystallization, X. Jiang, R.H. Nochetto and C. Verdi 303–317

Plasticity
A formulation of the MITC4 shell element for finite strain elasto-plastic analysis, E.N. Dvorkin, D. Pantuso and E.A. Repetto 17– 40
Generalised hardening plasticity approximated via anisotropic elasticity: A neural network approach, P.S. Theocaris and P.D. Panagiotopoulos 123–139

Problems in physics
Numerical solution of two-carrier hydrodynamic semiconductor device equations employing a stabilized finite element method, N.R. Aluru, K.H. Law, A. Raefsky, P.M. Pinsky and R.W. Dutton 187–220

Shells and plates
A formulation of the MITC4 shell element for finite strain elasto-plastic analysis, E.N. Dvorkin, D. Pantuso and E.A. Repetto 17– 40
Chebyshev series solution to non-linear boundary value problems in rectangular domain, Y. Nath and S. Kumar 41– 52

Solution of differential equations
A self-optimizing single-step algorithm for the numerical integration of parabolic equations, R. Ganesan and N.J. Salamon 109–121

Chebyshev series solution to non-linear boundary value problems in rectangular domain, Y. Nath and S. Kumar 41– 52
Implicit time integration of a class of constrained hybrid formulations—Part I: Spectral stability theory, C. Farhat, L. Crivelli and M. Géradin 71–107

Solutions of ordinary and partial differential equations
A P^1–P^0 finite element method for a model of polymer crystallization, X. Jiang and R.H. Nochetto and C. Verdi 303–317
Chebyshev series solution to non-linear boundary value problems in rectangular domain, Y. Nath and S. Kumar 41– 52
Computational procedures for topological shape design, M.S. Vimawala and G.M. Turkiyyah 257–285
Implicit time integration of a class of constrained hybrid formulations—Part I: Spectral stability theory, C. Farhat, L. Crivelli and M. Géradin 71–107

Stability in structural mechanics
Dynamic stability of a rod with an intermediate spring support subject to subtangential follower forces, H.P. Lee 41– 52

Stochastic processes
Generalised hardening plasticity approximated via anisotropic elasticity: A neural network approach, P.S. Theocaris and P.D. Panagiotopoulos 123–139

Structural mechanics
A formulation of the MITC4 shell element for finite strain elasto-plastic analysis, E.N. Dvorkin, D. Pantuso and E.A. Repetto 17– 40
Chebyshev series solution to non-linear boundary value problems in rectangular domain, Y. Nath and S. Kumar 41– 52
Computational prediction and redesign for viscoelastically damped structures, X. Cao and H.-P. Mlejnek 1– 16
Hybrid analysis of Lamb wave reflection by a crack at the fixed edge of a composite plate, W.M. Karunasena, K.M. Liew and S. Kitipornchai 221–233

Turbulence
A new Reynolds stress algegraic equation model, T.-H. Shih, J. Zhu and J.L. Lumley 287–302

Viscoelastic and viscoplastic media
Computational prediction and redesign for viscoelastically damped structures, X. Cao and H.-P. Mlejnek 1– 16
Numerical analysis of a FEM for a transient viscoelastic flow, J. Baranger and S. Wardi 171–185

Wave motion
Hybrid analysis of Lamb wave reflection by a crack at the fixed edge of a composite plate, W.M. Karunasena, K.M. Liew and S. Kitipornchai 221–233
